

PipeChain for VMI

- » Lower tied-up capital » Collaboration » Network visibility
- » Improved profitability » Higher service level » Lower cost

The **PipeChain® software** can integrate the material flow throughout your supply chain, from raw material to end customers, into **one automatic, demand-driven, real-time execution process**. It handles both distribution and production processes. This **multi-tier collaboration** capability is patented.

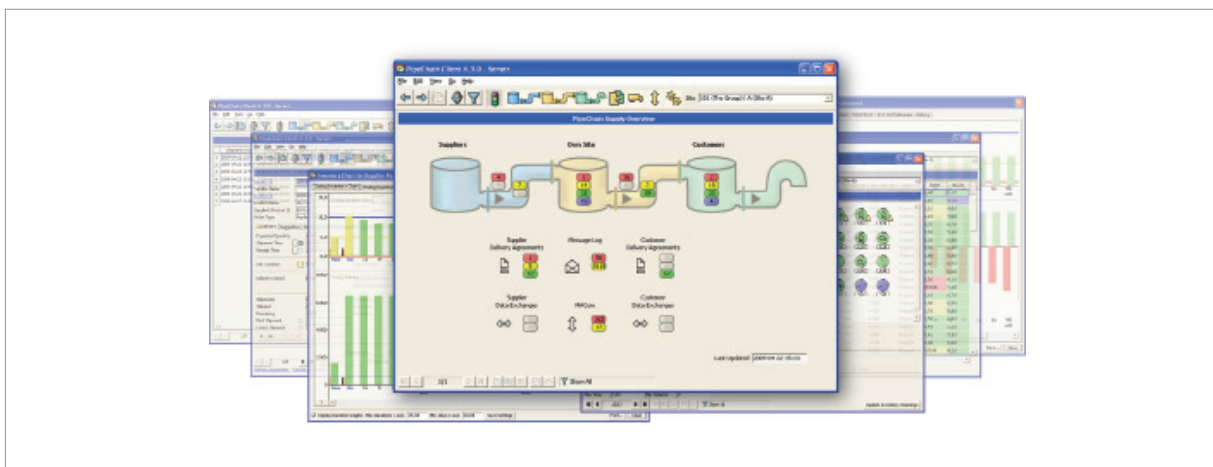

All partners in the network have **access to all available processes**. The PipeChain® software ensures that the network flow is controlled, **fast and transparent**. The PipeChain® software is designed to be **the backbone for balancing and monitoring the supply-chain network**, working closely with each company's ERP system and it can be **fully integrated**

with ERP systems for maximum automation.

The PipeChain® software ensures you, your customers, and your suppliers have **the same data, the same screens, the same processes, the same alerts, and the same key performance indicators, regardless of ERP and operating systems**.

Gain from a win-win relation where customers have **no order administration** and suppliers can plan their **production according to real demand**. Both parties benefit from **low stock** levels and very **high service levels**.

On **pipechain.com** you will find several examples of the benefits we provide to our customers.

The leading software for automated VMI
